ARTIFICIAL INTELLIGENCE-THEORY AND PRACTICE

Dr. Amit Kumar Mehar

Associate Professor, Department of Mechanical Engineering, Raghu Engineering College (Autonomous), Vishakhapatnam, Andhra Pradesh, India.
Pin Code:531162.

Dr. Raj Kumar Sahu

Assistant Professor, Department of Electronics and Communication Engineering, ASET, Amity University, Raipur, Chhattisgarh, India. Pin Code:493225.

Mr. S M K Sukumar Reddy

HoD and Associate Professor, Department of Electronics and Communication Engineering, Vaagdevi Institute of Technology and Science, Proddatur, Andhra Pradesh, India. Pin Code:516360.

Dr. U. D. Prasan

Professor, Department of Computer Science and Engineering, Aditya Institute of Technology and Management (AITAM), Tekkali, Srikakulam District, Andhra Pradesh, India. Pin Code: 532201

TABLE OF CONTENTS

ABOUT THIS BOOK	i
LIST OF FIGURES	xi
LIST OF TABLES	xiii
1 INTRODUCTION TO ARTIFICIAL INTELLIGENCE	1
1.1 Artificial Intelligence	1
1.2 A Brief History of AI	1
1.3 Goals of Artificial Intelligence	2
1.4 Branches of Artificial Intelligence	4
1.5 Classifications of Artificial Intelligence	10
1.6 The Turing Test	13
1.7 Rational Agents	14
1.8 Applications of AI in the Real World	15
1.9 Ethical and Societal Implications of Artificial Intelligence	18
1.10 Challenges and the Future of Artificial Intelligence	19
2 MATHEMATICS FOR ARTIFICIAL INTELLIGENCE	21
2.1 Introduction	21
2.2 Linear Algebra	22
2.2.1 Vectors: Definition and Operations	22
2.2.2 Matrices: Basics and Multiplication	24
2.2.3 Special Matrices: Identity, Diagonal, and Sparse Matrices	25
2.2.4 Eigenvectors and Eigenvalues: Concepts and Applications	26
2.3 Probability and Statistics	29
2.3.1 Fundamentals of Probability	29
2.3.2 Bayes' Theorem and Its Importance in AI	30
2.3.3 Conditional Independence and Graphical Models	30
2.3.4 Probability Distributions: Gaussian, Bernoulli, and Multi-nomial	32

2.3.5	Descriptive Statistics: Mean, Variance, and Standard Deviation	33
2.4	Calculus and Optimization in AI	35
2.4.1	Introduction to Derivatives and Gradients	35
2.4.2	Partial Derivatives and Gradient Vectors	36
2.4.3	The Chain Rule and Its Application in Neural Networks . . .	36
2.5	Optimization in AI	37
2.5.1	Objective Functions and Optimization Problems	37
2.5.2	Gradient Descent Algorithm: Theory and Variants	38
2.5.3	Convex Functions and Their Importance in Optimization . . .	40
2.5.4	Other Optimization Techniques: Newton's Method and Evolutionary Algorithms	41
2.5.5	Common Types of Evolutionary Algorithms	42
3	SEARCH AND PROBLEM SOLVING	45
3.1	Introduction to Search in Artificial Intelligence	45
3.1.1	Nature of Problem Solving in AI	46
3.1.2	Search as a Fundamental Technique	47
3.1.3	Examples of Search Applications	48
3.1.4	Performance Measures and Problem Characteristics	50
3.2	Problem Formulation	51
3.2.1	Components of a Well-Defined Problem	52
3.2.2	State Space Representation	53
3.2.3	Initial and Goal States	55
3.2.4	Transition Model and Path Cost	57
3.2.5	Case Studies in Problem Formulation	58
3.3	State-Space Search	59
3.3.1	Search Trees and Search Graphs	59
3.3.2	Exploration Strategies	60
3.3.3	Measuring Search Efficiency: Completeness, Optimality, Time, and Space	62
3.4	Uninformed Search Strategies	63
3.4.1	Characteristics of Uninformed Search	63

3.4.2	Breadth-First Search	64
3.4.3	Depth-First Search	64
3.4.4	Uniform-Cost Search	65
3.4.5	Comparative Analysis of Uninformed Methods	66
3.5	Informed Search Strategies	67
3.5.1	The Role of Heuristics in Search	67
3.5.2	Best-First Search: General Approach	68
3.5.3	A* Search Algorithm	68
3.5.4	Heuristic Design and Evaluation	69
3.5.5	Practical Considerations in Heuristic Search	70
3.6	Adversarial Search	70
3.6.1	Problem Characteristics: Multi-agent, Competitive Environ- ments	71
3.6.2	Game Trees and Evaluation Functions	71
3.6.3	The Minimax Algorithm	72
3.6.4	Alpha-Beta Pruning	73
3.6.5	Practical Aspects of Game Playing Agents	74
4	KNOWLEDGE REPRESENTATION AND REASONING	76
4.1	Introduction to Knowledge Representation	76
4.1.1	Importance of Knowledge in AI	77
4.1.2	Characteristics of Knowledge Representation Systems	78
4.1.3	Trade-offs in Knowledge Representation	79
4.2	Propositional Logic	80
4.2.1	Syntax and Semantics	81
4.2.2	Logical Connectives and Truth Tables	82
4.2.3	Inference Rules and Proof Systems	82
4.2.4	Limitations of Propositional Logic	83
4.3	First-Order Logic	84
4.3.1	Syntax: Terms, Predicates, Quantifiers	84
4.3.2	Semantics: Interpretations and Models	85
4.3.3	Expressive Power of FOL	86
4.3.4	Knowledge Representation in FOL	86

4.4	Resolution and Unification	87
4.4.1	Resolution Principle in Propositional Logic	87
4.4.2	Resolution in First-Order Logic	88
4.4.3	Unification Algorithm and Most General Unifier	89
4.4.4	Applications in Automated Theorem Proving	91
5	INTRODUCTION TO MACHINE LEARNING	92
5.0.1	Definition and Historical Context	92
5.0.2	The Role of Learning in AI	93
5.0.3	Types of Data and Learning Tasks	93
5.0.4	Applications Across Domains	94
5.1	Learning Paradigms	95
5.1.1	Supervised Learning	96
5.1.2	Unsupervised Learning	97
5.1.3	Reinforcement Learning	98
5.2	Model Representation and Selection	98
5.2.1	Hypothesis Space and Inductive Bias	99
5.2.2	Common Models	100
5.2.3	Model Selection Techniques	101
5.3	Generalization, Overfitting, and Underfitting	101
5.3.1	The Concept of Generalization	102
5.3.2	Overfitting and Underfitting Explained	102
5.3.3	Bias-Variance Tradeoff	103
5.4	Evaluation Metrics and Techniques	103
5.4.1	Performance Metrics	104
5.4.2	Confusion Matrix and ROC Curves	104
5.4.3	Choosing the Right Metric	105
5.5	Practical Considerations and Challenges	106
5.5.1	Data Quality and Preprocessing	107
5.5.2	Feature Engineering and Selection	108
5.5.3	Model Interpretability and Ethics	109
5.5.4	Scalability and Computational Constraints	110

6	CLASSICAL MACHINE LEARNING ALGORITHMS	112
6.0.1	Key Characteristics	112
6.0.2	Importance and Relevance	113
6.0.3	Comparison with Deep Learning	114
6.0.4	Mathematical Viewpoint	115
6.0.5	When to select classical ML and DL	116
6.0.6	Use Cases and Limitations	116
6.0.7	Common Use Cases	116
6.0.8	Limitations of Classical ML	117
6.1	Regression Techniques	118
6.2	Optimization Techniques	119
6.2.1	Assumptions	120
6.2.2	Regularization	120
6.2.3	Logistic Regression	121
6.3	Decision Trees and Rule-Based Learning	122
6.3.1	Basics of Decision Trees	123
6.3.2	Splitting Criteria	123
6.3.3	Overfitting and Pruning	124
6.3.4	Common Algorithms	124
6.3.5	Random Forests (Optional)	124
6.3.6	Tree Structure	125
6.4	k-Nearest Neighbors (k-NN)	125
6.4.1	k-NN as Lazy Learning	125
6.4.2	Distance Metrics	126
6.4.3	Choosing the Value of k	126
6.4.4	Variants of k-NN	127
6.4.5	Complexity and Optimizations	127
6.5	Clustering Algorithms	127
6.5.1	K-Means Clustering	127
6.5.2	Hierarchical Clustering	129
6.6	Comparative Analysis and Algorithm Selection	129
6.6.1	Strengths and Weaknesses	130

6.6.2	Guidelines for Model Selection	130
6.6.3	Trade-offs in Algorithm Choice	131
7	DEEP LEARNING	133
7.1	Introduction to Deep Learning	133
7.1.1	What is Deep Learning?	133
7.1.2	Key Differences from Classical Machine Learning	134
7.1.3	Hierarchical Feature Learning	134
7.1.4	Applications of Deep Learning	134
7.2	Artificial Neural Networks (ANNs)	134
7.2.1	Training ANNs	135
7.2.2	Learning Dynamics and Challenges	136
7.2.3	Applications	136
7.2.4	Biological Inspiration and Basic Concepts	136
7.2.5	Structure of a Neuron and Activation Functions	137
7.2.6	Architecture of a Feedforward Neural Network	138
7.2.7	Forward Propagation	140
7.2.8	Cost Functions and Loss Minimization	140
7.2.9	Backpropagation and Gradient Descent	141
7.2.10	Hyperparameter Tuning and Overfitting	142
7.2.11	Regularization Techniques: Dropout and Weight Decay	142
7.3	Convolutional Neural Networks (CNNs)	143
7.3.1	Motivation and Use Cases for Vision Tasks	144
7.3.2	Convolution Operation and Feature Maps	144
7.3.3	Pooling Layers (Max and Average)	145
7.3.4	CNN Architectures: LeNet, AlexNet, VGG, ResNet	146
7.3.5	Flattening and Fully Connected Layers	148
7.3.6	Training CNNs and Visualization of Filters	148
7.4	Recurrent Neural Networks (RNNs) and LSTMs	150
7.5	Autoencoders	151
7.6	Generative Adversarial Networks (GANs)	153
7.7	Transfer Learning	154

8	NATURAL LANGUAGE PROCESSING	157
8.1	Introduction to Natural Language Processing	157
8.1.1	NLP vs. Traditional Text Processing	157
8.1.2	Challenges in NLP	158
8.2	Basic NLP Tasks	158
8.2.1	Tokenization and Normalization	159
8.2.2	Stop Word Removal and Stemming	159
8.2.3	Part-of-Speech (POS) Tagging	160
8.2.4	Syntactic Parsing (Dependency and Constituency Parsing)	160
8.3	Word Representations	161
8.3.1	One-Hot Encoding and Bag of Words (BoW)	161
8.3.2	Term Frequency–Inverse Document Frequency (TF-IDF)	161
8.3.3	Word Embeddings	162
8.4	Deep Learning for NLP	163
8.4.1	Sequence Models and RNNs	163
8.4.2	Encoder-Decoder Architecture	164
8.4.3	Attention Mechanism	165
8.5	Transformer-Based Models	165
8.5.1	The Transformer Architecture: Self-Attention and Multi-head Attention	165
8.5.2	BERT: Bidirectional Encoder Representations from Transform- ers	166
8.5.3	GPT: Generative Pretrained Transformer	166
8.5.4	Comparison between BERT and GPT	167
8.5.5	Fine-Tuning and Transfer Learning in NLP	167
8.6	Applications of NLP	167
8.6.1	Machine Translation	168
8.6.2	Question Answering	168
8.6.3	Sentiment Analysis	168
8.6.4	Text Summarization	169
8.6.5	Named Entity Recognition (NER)	169
8.7	Challenges and Future Directions in NLP	170

8.7.1	Handling Ambiguity and Context	170
8.7.2	Multilingual NLP	170
8.7.3	Ethics and Bias in Language Models	170
8.7.4	Trends	170
9	COMPUTER VISION	172
9.1	Introduction to Computer Vision	172
9.1.1	Definition and Scope	172
9.1.2	Role in Artificial Intelligence	173
9.1.3	Applications in Real-World Domains	173
9.2	Image Preprocessing and Filtering	174
9.2.1	Image as a Matrix of Pixels	175
9.2.2	Grayscale and RGB Conversion	175
9.2.3	Image Filtering Techniques	176
9.2.4	Mathematical Representation of Convolution	178
9.2.5	Non-linear Filters	178
9.2.6	Edge Detection Techniques	179
9.2.7	Laplacian of Gaussian (LoG)	180
9.2.8	Edge Linking and Contour Detection	181
9.3	Object Detection and Classification	182
9.3.1	Overview of Object Recognition Pipeline	183
9.3.2	Sliding Window and Region Proposal Methods	184
9.3.3	Traditional Classifiers: SVM, k-NN, and HOG	185
9.3.4	Deep Learning Approaches	185
9.4	CNN Architectures for Vision	188
9.4.1	LeNet	188
9.4.2	9AlexNet	189
9.4.3	Key Features of AlexNet	189
9.4.4	VGGNet	191
9.4.5	ResNet	192
9.4.6	ResNet-50 Architecture Overview (High-Level)	193
9.4.7	Comparison of CNN Architectures	193
9.5	Vision Transformers (ViTs)	194

9.5.1	Transformer Encoder for Vision	195
9.5.2	Comparison with CNNs	196
9.6	Generative Vision Models	197
9.6.1	Overview of Generative Models	197
9.6.2	Variational Autoencoders (VAEs)	198
9.7	Generative Adversarial Networks (GANs)	199
9.7.1	Variants of GANs	200
9.7.2	Applications of Generative Models	201
9.8	Summary and Future Directions	202
9.8.1	Trends in Visual Intelligence	203
9.8.2	Multimodal Vision-Language Models (e.g., CLIP, DALL·E)	204
9.8.3	Ethical Issues in Visual AI	205
9.8.4	Open Challenges and Research Frontiers	205
	REFERENCES	206

LIST OF FIGURES

1.1	History of Artificial Intelligence	2
1.2	Basic branches of Artificial Intelligence	4
1.3	Example for machine learning	5
1.4	Biology of a neuron	7
1.5	Communication with computer	8
1.6	Sofia robot	9
1.7	Human eye-brain interaction	10
1.8	Sky with few dark grey clouds	11
1.9	Classifications of Artificial Intelligence	12
2.1	Vector Operations in Two-Dimensional Space	24
2.2	Matrix Multiplication Example	25
2.3	Types of Matrices: Identity, Diagonal, Sparse	26
2.4	Eigenvectors and Eigenvalues Visualization	29
2.5	Bayes Theorem Diagram	31
2.6	Gradient Descent on Cost Surface	40
3.1	Problem Formulation Elements in AI	54
3.2	Structure of a State-Space Search Tree	60
3.3	Breadth-First vs Depth-First Search Paths	61
3.4	Game Tree for Minimax Algorithm	73
3.5	Alpha-Beta Pruning	75
4.1	Components of a Knowledge-Based System	78
4.2	Syntax Tree of a Propositional Formula	81
4.3	Truth Table for Logical Connectives	83
4.4	First-Order Logic Representation Diagram	85
4.5	Resolution Process in Predicate Logic	89
4.6	Unification Algorithm Flow	90
5.1	Types of Machine Learning Approaches	96
5.2	Bias-Variance Tradeoff Curve	103
5.3	Confusion Matrix for Binary Classification	105

5.4	ROC Curve with AUC Highlighted	106
5.5	Machine Learning Pipeline	107
5.6	Feature Engineering Workflow	108
5.7	Impact of Data Quality on Model Accuracy	110
6.1	Linear vs Logistic Regression Curves	120
6.2	Effect of Regularization on Model Accuracy	121
6.3	Decision Tree Structure with Splitting	123
6.4	Overfitting and Pruning in Trees	124
6.5	k-NN Classification in Feature Space	126
6.6	K-Means Clustering with Centroids	128
7.1	Structure of an Artificial Neural Network	135
7.2	Feedforward Neural Network Architecture	138
7.3	CNN Layers: Convolution, Pooling, FC	144
7.4	Feature Maps in Convolutional Layers	149
7.5	Unrolled RNN Structure	150
7.6	GAN Architecture Overview	153
8.1	Text Preprocessing Pipeline	159
8.2	Word Embedding Space Visualization	162
8.3	Encoder-Decoder Architecture	164
8.4	Attention Mechanism in NLP	165
8.5	Applications of NLP	167
9.1	Image as RGB Pixel Matrix	175
9.2	Edge Detection Techniques: Sobel and Canny	180
9.3	Object Detection and Classification Pipeline	182
9.4	Comparison of CNN Architectures	194
9.5	Vision Transformer Block Diagram	195
9.6	GAN-Based Image Generation	200

LIST OF TABLES

3.1	Comparison of Uninformed Search Algorithms	66
6.1	Comparison of Classical ML vs. Deep Learning	115
6.2	Comparative Summary of Classical ML Algorithms	130
9.1	Comparison of Popular CNN Architectures	194
9.2	Comparison of CNNs and Vision Transformers (ViTs)	197
